PROFESSIONAL SUMMARY

Builder and analyst who turns ambiguous business problems into shipped, working systems across data engineering, workforce automation, full-stack development, and applied AI. Owns data infrastructure end-to-end at a fast-moving organization — designing cloud data warehouses, building ETL pipelines, and using generative AI tooling daily to ship in a fraction of the usual time.

Background as a software engineer on a platform processing 100M+ monthly transactions, with hands-on experience across SQL, Python, Java, cloud data warehousing (Google BigQuery, AWS), BI dashboards, and modern web development (Next.js, React, TypeScript).

EDUCATION

University of Southern California — MS, Business Analytics; GPA 3.7, Dean's List

Aug 2024 – May 2026

Delhi Technological University — B.Tech, Computer Science; GPA 3.44

Aug 2018 – May 2022

PROFESSIONAL EXPERIENCE

Living Advantage Inc | Data Management Coordinator, AI Automation Engineer

Feb 2026 – Present

- Leading the build-out of a Google BigQuery data warehouse on Google Cloud Platform, consolidating CRM and program data from Salesforce and Apricot CRM into a single queryable model that replaced manual spreadsheet-based reporting.
- Designed and maintained ETL pipelines in SQL that migrated and continuously sync ~20,000 contacts and ~2,000 accounts from Salesforce Non-Profit CRM into a custom-built CRM portal, applying multi-stage validation to ensure data integrity in production.
- Independently designed, built, and shipped eLockBox, a full-stack secure document platform (Next.js, React, TypeScript, S3-compatible storage) that lets at-risk youth safely store and share sensitive personal documents with case managers and housing aid providers.
- Architected and launched an autonomous AI voice agent (Twilio, ElevenLabs, n8n) that independently handles inbound and outbound calls, translating an ambiguous automation need into a scoped, production feature.
- Automated financial and payroll reporting (QuickBooks, Google Apps Script, PowerShell, n8n) — including timecard extraction and payroll-sheet generation — cutting manual processing time by ~90%.
- Leverage generative AI coding tools (Claude Code) daily to cut internal tool development time by up to 400% (from ~5 days to under a day), and built the organization's first KPI reporting dashboards from scratch as sole technical owner of data infrastructure and automation across 5 production systems.

Paytm | Software Development Engineer, Delhi, India

Jun 2022 – Feb 2024

- Built end-to-end ETL pipelines in Python and SQL to ingest, clean, and transform large-scale transaction data in production, supporting analytics APIs and multi-dimensional KPI frameworks for Product, Finance, and Operations leads.
- Owned real-time monitoring dashboards (MongoDB, AWS DynamoDB, Redshift) for a platform processing 100M+ monthly transactions, cutting issue-resolution time by 50% through proactive dashboarding and alerting.
- Built and maintained CI/CD pipelines (Jenkins, Kafka) and supported Kubernetes deployments, monitoring pod and service health to keep release and data pipelines running reliably.
- Analyzed loan performance data (repayment trends, risk indicators) for the Lending team, feeding data-driven insights into credit-decisioning discussions.
- Partnered cross-functionally with Product, Finance, and Operations leads to architect analytics APIs and establish multi-dimensional KPI frameworks, driving a 20% increase in operational efficiency and a documented \$2M+ impact on revenue.
- Served as liaison between Data Scientists and Data Engineers, defining transformation logic and data-modeling standards for ETL/ELT workflows to ensure consistent, high-quality data definitions across teams.

University of Southern California | Teaching Assistant, PPDE 613

Jan 2026 – May 2026

- Mentored 70+ graduate students in advanced SQL, Python, and Tableau, coaching data-driven storytelling and clear communication of technical findings to non-technical stakeholders.

Almoayyed Computers | Business Analysis Intern, Manama, Bahrain

Apr 2024 – Jun 2024

- Led discovery workshops with enterprise stakeholders to define data and reporting requirements for CRM sales-reporting dashboards.
- Delivered 15+ automated Power BI dashboards and interactive reports from those requirements, improving reporting efficiency and data visibility by 25%.

SKILLS

Languages: Python, SQL (joins, window functions, CTEs), Java, JavaScript/TypeScript, Scala, PowerShell

Data & Cloud: Google BigQuery, Google Cloud Platform, AWS (DynamoDB, S3, Redshift), MongoDB, Databricks, Snowflake, Kafka, Jenkins, Kubernetes, Salesforce, Apricot CRM

Full-Stack & Web: Next.js, React, TypeScript, REST APIs, S3-compatible object storage

AI & Automation: Claude Code, GenAI-driven development, agent orchestration (Twilio, ElevenLabs, n8n), Google Apps Script

BI & Analytics: Tableau, Power BI, Excel (VBA, Power Query, Pivot Tables), statistical methods (t-tests, chi-squared tests, hypothesis testing). Tools: QuickBooks, JIRA, Confluence, Git
